Patent Number: WO200140014 A1
20010607**ADJUSTABLE SEAT FOR MOTOR VEHICLE**

(EP1240047)

VERSTELLBARER SITZ FÜR KRAFTFAHRZEUG

Index Terms: TRANSPORT; MOTOR VEHICLE;
SEAT; ADJUSTMENT; REINFORCING
PIECE; ABSORPTION; STRESS;
SHOCK; LIMITATION;
DEFORMATION

(US20030075893)

An adjustable seat for a motor vehicle including a substantially horizontal seating element, on a rear part of which is articulated a back. An adjusting device adjusts the position of the seating element of the seat relative to the vehicle structure and locks and unlocks the adjusting device. A reinforcing device, separate from the adjusting device, absorbs at least part of the impact loads provoked by a longitudinal shock, in particular at the front of the vehicle so that, at the time of impact, the deformation of the adjusting device is reduced, thereby reducing the tilting movement, in particular forward, of the adjustable seat about a rocking axis with global transverse orientation.
